## Mission Statement

Your Healthy Spaces exists to create a safe and healthy environment for every individual. Our company improves communities by helping businesses provide safer and healthier environments for their staff and customers.

## Vision Statement

At Your Healthy Spaces, we provide peace of mind to our customers and their staff that they are safe from harmful germs and pathogens.

A photograph of a meeting room with a blue overlay. A man in a white shirt stands next to a whiteboard, presenting to a group of people seated on blue sofas. The whiteboard has various notes and diagrams. The room has large windows and a brick wall.

# Who we are.

---

Your Healthy Spaces is an environmental solutions company focused on improving the health of Americans around the country. Our company is impacting the standard of disinfection through our innovative application technology paired with a hospital-grade disinfectant.

Our method of reaching high-level disinfection stems from the latest technological advances that are currently used in healthcare facilities. With the help of Your Healthy Spaces, these are now available for your home and business.

# HOW WE ARE INNOVATING INFECTION CONTROL

01

## Mechanical vs Chemical Kill

While chemicals use poison to kill germs, YHS uses a solution that mechanically kills. Our solution, combined with our innovative application technology, uses energetically charged particles to magnetically pull bacteria toward our solution's spiked molecular structures.

02

## Whole Room Disinfection

Manual disinfection provides the least effective coverage due to human error and hard-to-reach pathogens. Through our electrostatic spraying system, the electro-mist of our solution moves upward against gravity to coat even the most hard to reach and hidden surfaces.

# HOW WE ARE INNOVATING INFECTION CONTROL

03

## Log Reduction

Conventional cleaning methods rarely exceed a 2 log kill against harmful germs and pathogens. Our services provide up to a 6 log kill against pathogens and viruses such as Influenza, E Coli, MRSA, Staph, and Norovirus.

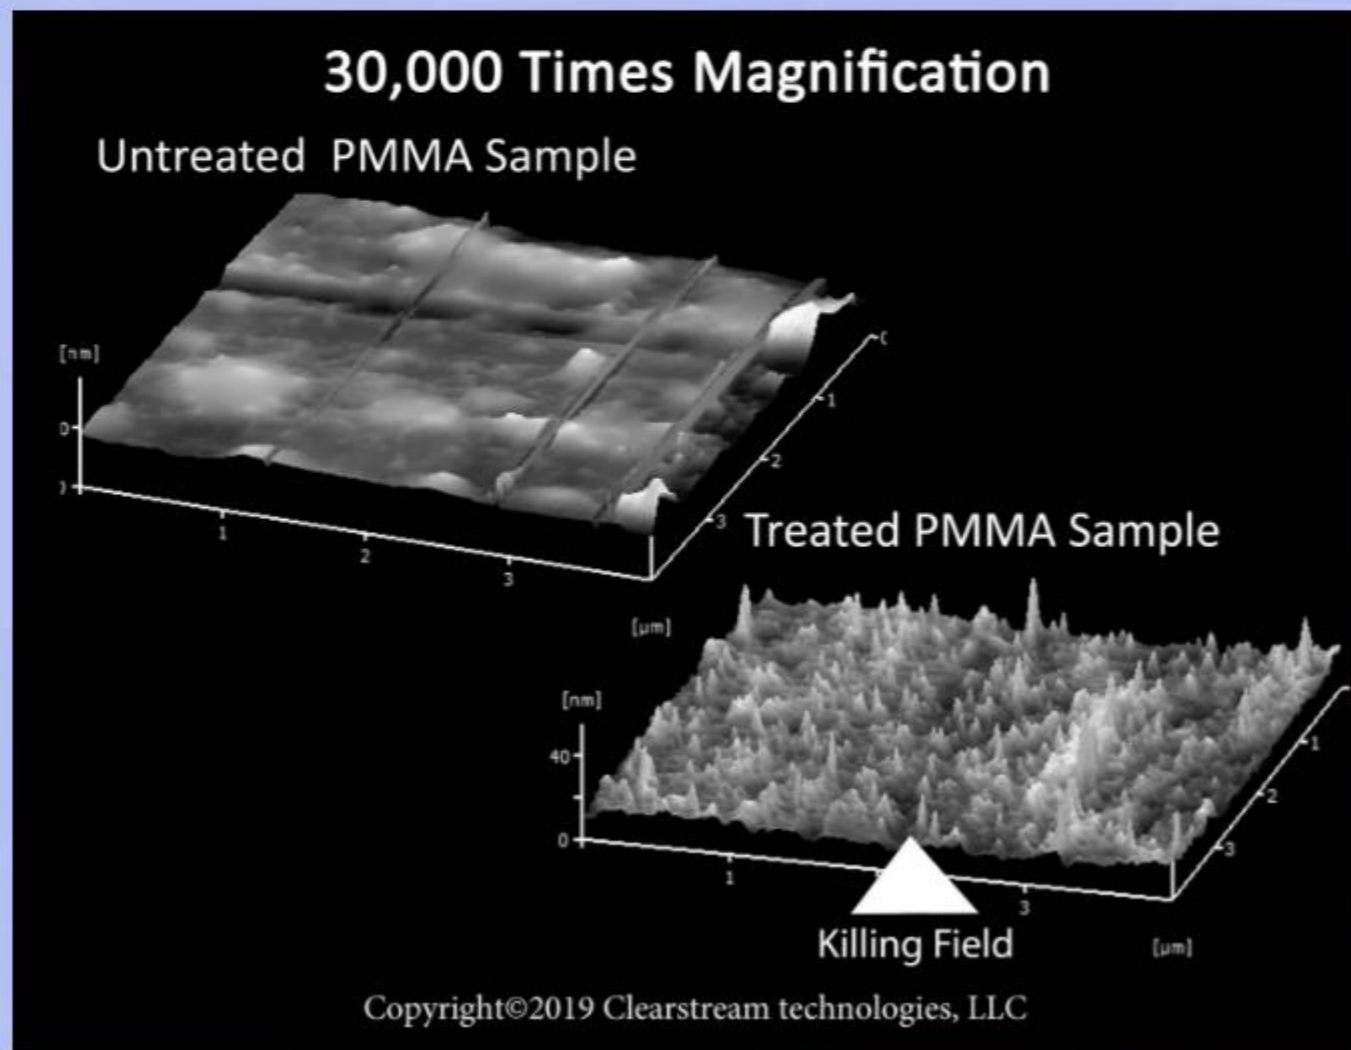

04

## Protection after Disinfection

After disinfection treatment, we offer a protection service with our bio-static, EPA registered protectant. This solution creates a protective coating proven to reduce the risk of surface cross contamination. Every treated surface therefore becomes a self-disinfecting surface.

# OUR SOLUTION PROVIDES 24/7 PROTECTION

[www.yourhealthspaces.com](http://www.yourhealthspaces.com)

## INNOVATIVE APPLICATION

Despite the best efforts of staff, a significant amount of potentially dangerous pathogens remain after manual cleaning. Manual disinfection provides the least effective coverage due to human error and hard-to-reach pathogens.

Through our electrostatic spraying system, the electro-mist of our solution moves upward against gravity to coat even the most hard to reach and hidden surfaces. Our application system uses up to 65% less chemicals to cover and disinfect the same area, saving you both time and money.

A person wearing a white protective suit, mask, and gloves is using a green electrostatic sprayer to disinfect a hospital hallway. The hallway is lined with rows of hospital beds, and the background shows typical hospital furniture and equipment.

## Our Method.

## Procedures for Disinfection and Protection Service

*Your Healthy Spaces is excited to partner with your company to ensure that your employees are safe from harmful germs and pathogens throughout the year.*

### Let's Talk.

We want to hear about your space, desired outcomes, allocated budget, and timeframe. Every space is unique. Let's create a customized plan for your specific space.

### Walk Through.

Our service technicians will walk through the space to better understand the high touch surfaces, crowded areas, hidden spaces, and building layout.

### Disinfect the Space.

Using electrostatic sprayers, our team will spray our EPA registered disinfectant, killing up to 99.999% of germs, both on visible and hidden surfaces.

### Protect the Space.

Our team will use a combination of spraying and wiping down our protectant on the high touch surfaces, protecting them for 30-90 days.

# Peace of mind.

---

"Chemicals released when using cleaning supplies contribute to chronic respiratory problems, allergic reactions and headaches. Studies are underway to assess how these chemicals affect people who have asthma and other respiratory illnesses...studies link exposure to chemicals from cleaning supplies to occupational asthma and other respiratory illnesses."

**Your Healthy Spaces is not playing catch up; By design we educate and empower our partners to leave the old traditional methods and embrace the new.**
